

November 3, 2020

Richard Corey, Executive Officer
California Air Resources Board
P.O. Box 2815
Sacramento, CA 95814

SUBJECT: Proposed CTR Regulation and EICG Rule

Dear Mr. Corey:

The Mojave Desert Air Quality Management District (MDAQMD) appreciates the opportunity to submit our formal comments regarding the proposed changes to the CTR regulation and EICG rule that will be considered before the CARB Board at their November meeting. I appreciate CARB's efforts and willingness to include the Districts in this effort. MDAQMD supports strengthening and synchronizing the criteria and toxics inventory process. However, as a local air district facing the challenging implementation of the proposed changes, the MDAQMD requests that the issues raised below be addressed in both rulemakings prior to adoption:

Implementation Costs/Outreach

The CTR public notice estimates a ten-year cost to air districts of \$39 million to implement the CTR changes alone, and suggests that the air districts simply raise fees to cover this increased cost. Expanding the criteria and toxics emissions inventory process throughout the state to *anticipate future AB 617 communities* (and apparently an expected decline in mobile source emissions), and then asking air districts to figure out the means to pay for it, is nonsensical. AB 617 communities are required to create and implement expanded criteria and toxics inventory processes, and consequently have the statutory mandate to fund such expanded processes. The remainder of the state does not. Provide financial resources to meet this unfunded mandate, or do not require it.

The Districts have shared on many occasions the serious concerns of CARB revising or adopting regulations that have financial impacts not only on the Districts but on the sources themselves, many of them small sources that have limited finances and expertise to tackle the magnitude of what is being proposed in these revisions. Which brings me to the concern of Outreach to potentially impacted sources. There has been minimal, if any, attempts to reach out to the smaller source segment that will potentially be impacted by the proposed revisions. This means that the responsibility will also fall to the District's after the fact that revisions have been adopted. The appropriate way to engage in Outreach to potentially impacted sources is up front so that the process is transparent and the sources can have ample time to engage in the process to understand what the potential impacts will mean to them; this is exactly how the Districts are required to go about their regulatory revisions.

MOJAVE DESERT AIR QUALITY MANAGEMENT DISTRICT

BRAD POIRIEZ, EXECUTIVE DIRECTOR

Data Management

The proposed expansion of the criteria and toxics emission inventory process represents a massive expansion of the existing emissions inventory data stream, on a facility, device, process and pollutant basis. In effect, the proposed threshold levels will require the MDAQMD to collect emissions data from every facility (the alternative, evaluating facility applicability annually based on actual emissions, is too onerous). The promised data management tool to uniformly address CTR, CEI and AB2588 Hot Spots reporting has not been provided. Allegedly the proposed changes are intended to improve public access – it is not clear how. The proposed expansion does not solve existing problems, magnifies them, and has the potential to create new problems.

New Reporting Thresholds

Outside of AB 617 communities (or existing toxic inventory processes), there is no justification for lowering reporting thresholds to four tons per year (or zero tons per year for that matter). If there is belief that certain industries merit increased recordkeeping and reporting, the MDAQMD recommends studying samples of those industries and facilities to establish *actual emissions and associated risks* before applying blanket requirements throughout the state in anticipation of *potential emissions and potential risks*.

Excluding PERP Equipment (CARB run registration program)

It is curious that PERP equipment outside of major sources, already permitted and regulated by the state and the air districts, is excluded. Some PERP equipment has substantial use and therefore emissions. We would like to understand the justification for the exclusion of PERP equipment (other than PERP equipment at major sources which air districts are currently required to inventory).

New Pollutant Listings

The MDAQMD does not support mandatory reporting of pollutants for which there is no toxicity data, no CARB approved source test methodologies, and in most cases no emissions quantification possible. The MDAQMD supports the comment letters from the California Cement Manufacturers Environmental Coalition (CCMEC) of September 14 and 29, 2020 in their entirety (enclosed); while focused on the cement industry, the specific CCMEC pollutant and process comments apply to every industry statewide. To the extent the proposed emissions inventory regulatory changes give MDAQMD flexibility, the MDAQMD will be following the pollutant testing and reporting structure suggested by CCMEC for every affected industry and facility within the MDAQMD

I am concerned by the proposed actions – they will introduce regulatory confusion, they are proposed on a rushed timetable, there has been inadequate outreach, and implementation costs are not addressed. MDAQMD suggests first and foremost prolonging the hearing in order to have additional time to address the many outstanding issues we have brought to your attention above and also suggests that the proposed mandatory changes only be applicable within AB 617 communities, and retain current statute-required programs for the rest of the State of California.

Corey
November 3, 2020
Page 3 of 3

MDAQMD stands ready to continue to work with CARB on these revision efforts but requests that this effort be postponed until there is further outreach and efforts to explain and support the proposed revisions. If you have any questions regarding this letter, please contact me at 760-245-1661 extension 5737 or Alan De Salvio of my staff at extension 6726.

Sincerely,

Brad Poiriez
Executive Director

CTR EICG comment letter

CALIFORNIA CEMENT MANUFACTURERS ENVIRONMENTAL COALITION1107 9th Street, Suite 930, Sacramento, CA 95814, Phone: 916/447-9884

September 29, 2020

Mr. Gabe Ruiz
Manager, Toxics Inventory and Special Projects Section
California Air Resources Board
1001 I Street
Sacramento, CA 95814
E-mail: ab2588ei@arb.ca.gov

Dear Mr. Ruiz:

On behalf of the California Cement Manufacturers Environmental Coalition, we would like to thank you and other CARB staff members for accommodating a continuing dialogue to resolve the cement industry's concerns with proposed revisions to the AB 2588 reporting regulations.

Our industry's historical goal has been to work closely with CARB in the development of policies that are workable to both CARB's objectives and the cement industry's ability to effectively and efficiently comply with those objectives. In this letter, we are taking the informal comments provided earlier to CARB staff in various meetings and emails and presenting these as formal comments submitted as a public comment letter to the appropriate CARB email address. Upon your internal review of the concepts provided in this correspondence, CCMEC looks forward to further conversations with CARB in the EICG rule development process pertinent to the Portland Cement manufacturing industry.

In this letter, we are presenting three rule language change items for CARB's consideration.

- First, the language change to Appendix C referenced in Section VIII (see bolded language of insert to Section VIII), which is proposed to be modified in agreement with the letter issued on September 14 (see Attachment 1 and Attachment 4);
- Second, another language change, this time to Section II, to be consistent with the Section VIII change and the CCMEC letter (see Attachment 2); and
- Third, a request to change the effective date of certain chemicals for which the justification is as follows (see Attachment 3):

For Table 1, we started with the Appendix A list for the chemical groups identified in Appendix C for cement and uploaded them into an Excel sheet, then showed columns for the effective date assigned by CARB (second to last column) and for the effective date as proposed by CCMEC (last column). In this manner, we are presenting the request for effective dates to be changed as shown (all chemicals are listed in the table, but effective dates are only proposed to be changed for some of the chemicals).

REASONS FOR REQUESTING EFFECTIVE DATE CHANGES

Effective dates are proposed to be changed from e or ExistGrp to ChemSet1, or from ChemSet1 to ChemSet 2, as shown in Table 1, for one of the following reasons:

- A. Although listed in existing Appendix A (and previously included in Appendix C category listed), chemical was not addressed previously because of one or more of the following: no toxicity data available, no source test method available, obscure chemical previously viewed as irrelevant.
- B. Although listed in existing Appendix A, this chemical was not previously included in the Appendix C listing, and hence was not previously connected by CARB to cement manufacturing.
- C. In some cases, a group was divided up by CARB with some chemicals in the same group assigned by CARB to ChemSet1 and others to ChemSet2. We moved all chemicals in the same group (previously split between ChemSet1 and ChemSet2) to ChemSet2.

CONCLUSION

CCMEC appreciates the opportunity to comment on CARB's amended AB 2588 Emission Inventory and Criteria Guidelines (EICG) dated July 28, 2020 and looks forward to our next discussion with CARB to address the cement industry concerns.

For questions and/or concerns please feel free to contact me at your convenience.

Sincerely,

Frank T. Sheets
CCMEC Chairman

Enclosures:

1. Attachment 1 – EICG Regulation Appendix C Excerpt Modified
2. Attachment 2 – EICG Further Language Change Requested
3. Attachment 3 – Group Lists Table
4. Attachment 4 – Copy of Letter Submitted to CARB Dated September 14, 2020

Attachment 1 – EICG Regulation Appendix C Excerpt Modified

C. Specifications for Identifying Emission Points and Substances Emitted.

- (1) The facility operator shall identify and report in the emission inventory plan and the emission inventory report as a distinct emitting process or device each occurrence within the facility of the emitting processes and devices set forth in Appendices C-I and C-II (the Facility Guidelines Index, herein referred to as the "Facility Look-up Table"), and shall determine whether any listed substance is present, including but not limited to those indicated in Appendices C-I and C-II.
- (2) For the devices, emitting processes, and fugitive sources set forth for all facility classes in Appendix C-I and for the applicable facility class(es) set forth in Appendix C-II, the operator shall report all emissions of substances listed in Appendix A-I, and shall report the production, use, or other presence of substances listed in Appendix A-II. The operator shall also report the production, use, or presence of substances listed in Appendix A-III if the substance is manufactured by the facility and is released to the air.
- (3) The facility operator shall use and cite available technical guidance as needed to identify the presence of any listed substances and to quantify and report emissions in accordance with the requirements set forth in section VIII.E.
- (4) Nothing in sections VIII.C.(1) through (3), shall be construed as requiring that source testing be conducted for substances set forth in Appendix C. Further, in cases where a substance set forth in Appendix C is not in fact present at a particular facility, the facility operator shall not attempt to quantify the emissions of such substance, but shall provide adequate documentation to demonstrate to the district that the possible presence of the substance at the facility has been addressed and that there are no emissions of the substance for specified reasons.
- (5) When implementing the suggested chemical list by source category in the following Appendix C tables (as this list becomes applicable on the rule effective date), facilities will begin a chemical evaluation process as follows. Facilities will begin by evaluating qualitatively whether the chemical applies to the source category. The qualitative analysis could be based on process knowledge, engineering judgment, or lab analyses. If the chemical does apply, facilities will assess whether there is an EPA or ARB published source test method available for this chemical. If there is a published source test method available, the facility will perform source testing for the chemical. In case of source test results with non-detect values, facilities will follow ARB guidance on the procedure for addressing non-detect values and whether the chemical can be considered "not detected".

If the chemical does not apply to the source category, if there is no EPA or ARB published source test method available, or if the chemical can be considered "not detected" after source testing is performed, the chemical will not be reported under the ARB CTR rule and will not be included in prioritization score or health risk assessment calculations.

For new chemicals added to the Appendix C list as of the rule effective date, the chemical evaluation and source testing (where applicable) will be completed based on the schedule in the rule. For new chemicals added to Appendix C after the rule effective date, the new chemical will be addressed within two calendar years of the

end of the calendar year where the new chemical listing occurs. For new source test methods published by EPA or ARB after the rule effective date, the new source test methods will be incorporated within two calendar years of the end of the calendar year where the new source test method is published.

The above requirements also pertain to Appendix A chemical listings, where found to be applicable to a particular source category, but not included in the Appendix C list.

D. Exempted Uses.

The following uses of listed substances shall not be subject to this regulation:

- (1) Use as a structural component of the facility.
- (2) Personal use by employees or other persons of foods, drugs, cosmetics, tobacco products, and other personal items, including supplies of such products within the facility in an on-site cafeteria, store, or infirmary.
- (3) Office and administrative use of products including ink, marking pens, ink pads, correction fluid, correction fluid thinner, and glue.
- (4) Use of products for routine janitorial or facility grounds maintenance.
- (5) Use of products for structural maintenance and repair, including WD-40 and other lubricants, sealants, touch-up paints, spray paints, and varnishes. Structural maintenance does not include maintenance and repair of process and industrial equipment.

Attachment 2 – EICG Further Language Change Requested

AB2588 EICG language changes requested by CCMEC, Sept. 15, 2020:

Changes needed to Section II, H (4), presented below with requested changes (BOLD items are inserts):

(4) Availability of Emission Quantification Methods

If no emission quantification method exists to quantify emissions of a substance at the time of its "Effective Phase", the facility operator only needs to report the presence of the substance [removed section about use or production and form S-UP-Q].

The presence of the substance will be evaluated as follows:

- **Step 1—Evaluate whether the new chemical applies to cement:** If there is no specific basis for thinking that the chemical applies to cement, the chemical will be eliminated from further consideration. For chemicals that apply to cement, proceed to Step 2.
- **Step 2—Identify the source test method for the chemical group that the new chemical falls in and the analytes covered by that source test method:** If the chemical is not listed as an analyte in a standard EPA or ARB published source test method, the chemical will not be reported. For chemicals that have a standard EPA or ARB published source test method, proceed to Step 3.
- **Step 3—Perform testing on the new chemical:** If the chemical is not detected in source testing (per the procedure for handling non-detect values, to be agreed upon at a later time), the chemical will not be reported. For chemicals detected, these will be reported.

The availability of an emission quantification method shall be re-evaluated for chemicals not eliminated in Step 1 above, at the time of the next facility update reporting cycle. If a standard published EPA or ARB source test method (where the chemical is listed as an analyte in that method) is available one calendar year or more before the next facility update reporting cycle, emission quantification is required pursuant to the provisions in section VIII.E.(3).

Attachment 3 – Group Lists Table

Proposed Effective Date Changes by Chemical Groups

Group	Total Number of Chemicals	Number of Chemicals with Proposed Effective Date Change
PAHs	63	20
PAHRs	40	19
POMs	36	35
Fibrous Materials	16	14
Other Chemicals (miscellaneous)	4	2
PCDD/PCDFs and PCBs	43	0
Volatile Organics (excluding aldehydes)	2	0
Aldehydes	1	0
Inorganics (Cl2, HCl)	2	0
Metals (including metal compounds)	22	0
Total	229	90

These chemicals were determined by reviewing Appendix C of the proposed regulation and cross-referencing the entries with Appendix A of the proposed regulation. The Appendix C sections reviewed were the entries for "Industry/Emitting Process Level 2: Cement Manufacturing". An excerpt with these sections is provided on the last page of this document.

Notes from ARB Appendix A:

"ChemSet-1" is shown for Effective Phase to indicate newly added chemical substances that must be reported starting with 2022 emission inventory data year for facilities in District Group A, or 2023 for facilities in District Group B

"ChemSet-2" is shown for Effective Phase to indicate newly added chemical substances that must be reported starting with the 2028 emission inventory data year for facilities in District Group A, or 2027 for facilities in District Group B

A letter "e" is shown for Effective Phase to indicate an existing Appendix A chemical substance prior to MMYY Regulation amendment. These are required to be reported without phasing.

An existing group ("EditGroup") is shown for Effective Phase to indicate any substance under or added under an existing grouping in Appendix A prior to MMYY Regulation amendment. These are required to be reported without phasing.

Table 1 -- AB2588 Chemical List with Effective Date Changes Proposed, Sept. 15, 2020
POM

Row #	Group	Substance	Existing or New to Appendix A	Included as an Analyte in a Test Method	Effective Phase - Specified	Effective Phase - Proposed
1	POM-A	Dibenzofuran [POM]	Existing	No	e	ChemSet-1
2	POM-A	4-Aminobiphenyl [POM]	Existing	No	e	ChemSet-1
3	POM-A	Benzidine (and its salts) [POM]	Existing	No	e	ChemSet-1
4	POM-A	Benzidine-based dyes [POM] including but not limited to:	Existing	No	e	ChemSet-1
5	POM-A	Direct Brown 95 (technical grade) [POM]	Existing	No	e	ChemSet-1
6	POM-A	Biphenyl [POM]	Existing	No	e	ChemSet-1
7	POM-A	Chlorobenzilate [POM] (Ethyl-1,4'-dichlorobenzilate)	Existing	No	e	ChemSet-1
8	POM-A	DOT (1,1,1-Trichloro-2,2-bis(p-chlorophenyl)ethane) [Clotefontane] [POM]	New	No	e	ChemSet-1
9	POM-A	Dibenzo[a,h]acridine [POM]	Existing	No	e	ChemSet-1
10	POM-A	Dibenzo[a,j]acridine [POM]	Existing	No	e	ChemSet-1

13	POM-A	Dirofol [POM]	Existing	No	e	ChemSet-1
14	POM-A	3,3'-Dimethoxybenzidine [POM]	Existing	No	e	ChemSet-1
15	POM-A	4-Dimethylaminozobenzene [POM]	Existing	No	e	ChemSet-1
16	POM-A	3,3'-Dimethylbenzidine (o-Tolidine) [POM]	Existing	No	e	ChemSet-1
17	POM-A	Diphenyldydantoin [POM]	Existing	No	e	ChemSet-1
18	POM-A	1,2-Diphenylhexaazine (Hy-drazebenzene) [POM]	Existing	No	e	ChemSet-1
19	POM-A	Methylene diphenyl diisocyanate (MDI) [POM]	Existing	No	e	ChemSet-1
20	POM-A	4,4'-Isopropylidenedicetophenol [POM] (BPA) (see Bisphenol A)	Existing	No	e	ChemSet-1
21	POM-A	Methoxychlor [POM]	Existing	No	e	ChemSet-1
22	POM-A	4,4'-Methylene bis(2-chloroaniline) (MOCA) [POM]	Existing	No	e	ChemSet-1
23	POM-A	4,4'-Methylenedianiline (4,4'-diaminodiphenyl) [POM] (MDA)	Existing	No	e	ChemSet-1
24	POM-A	Mickler's ketone [POM]	Existing	No	e	ChemSet-1
25	POM-A	4-Nitro biphenyl [POM]	Existing	No	e	ChemSet-1
26	POM-A	N-Nitrosodiphenylamine [POM]	Existing	No	e	ChemSet-1
27	POM-A	p-Nitrosodiphenylamine [POM]	Existing	No	e	ChemSet-1
28	POM-A	PBBs (Polybrominated biphenyls) [POM] including but not limited to: 2-Phenylphenol [POM]	New	No	e	ChemSet-1
29	POM-A	Decabromodiphenyl oxide (BDE-209) [POM]	Existing	No	e	ChemSet-1
30	POM-A	Reserpine [POM]	Existing	No	e	ChemSet-1
31	POM-A	Trinitroacetyl phosphate [POM]	Existing	No	e	ChemSet-1
32	POM-A	Triphenyl phosphate [POM]	Existing	No	e	ChemSet-1
33	POM-A	Triphenyl phosphite [POM]	Existing	No	e	ChemSet-1
34	POM-A	Triphenyl phosphite [POM]	Existing	No	e	ChemSet-1
35	POM-A	Taroxifen citrate [POM]	New	No	e	ChemSet-1
36	POM-B2	Dibenzo[a,h]acridine [POM]	New	No	ChemSet-2	ChemSet-2

Notes from ARB Appendix A:

*ChemSet-1 is shown for Effective Phase to indicate newly added chemical substances that must be reported starting with 2022 emission inventory data year for facilities in District Group A, or 2023 for facilities in District Group B
 **ChemSet-2 is shown for Effective Phase to indicate newly added chemical substances that must be reported starting with the 2028 emission inventory data year for facilities in District Group A, or 2027 for facilities in District Group B
 A letter e ("e") is shown for Existing Phase to indicate an existing Appendix A chemical substance prior to MARRY Regulation amendment. These are required to be reported without phasing.
 An adding group ("Adding") is shown for Effective Phase to indicate any substance under or added under an existing grouping in Appendix A prior to MARRY Regulation amendment. These are required to be reported without phasing.

Attachment 4 – Copy of Letter Submitted to CARB Dated September 14, 2020

CALIFORNIA CEMENT MANUFACTURERS ENVIRONMENTAL COALITION1107 9th Street, Suite 930, Sacramento, CA 95814, Phone: 916/447-9884

September 14, 2020

Mr. Gabe Ruiz
Manager, Toxics Inventory and Special Projects Section
California Air Resources Board
1001 I Street
Sacramento, CA 95814

Dear Mr. Ruiz:

On behalf of the California Cement Manufacturers Environmental Coalition, we would like to thank you and other CARB staff members for accommodating a continuing dialogue to resolve the cement industry's concerns with proposed revisions to the AB 2588 reporting regulations.

Our industry's historical goal has been to work closely with CARB in the development of policies that are workable to both CARB's objectives and the cement industry's ability to effectively and efficiently comply with those objectives. This current correspondence provides further clarification of the topics discussed during our September 8th teleconference with you and other staff members, and as such is the second letter from CCMEC in response to the draft amended AB 2588 Emission Inventory and Criteria Guidelines (EICG) dated July 28, 2020. Upon your internal review of the concepts provided in this correspondence, CCMEC looks forward to further conversations with CARB in the EICG rule development process pertinent to the Portland Cement manufacturing industry.

The purpose of this letter is to provide background information on the cement industry's approach to compliance with the AB 2588 chemical list as shown in Appendices A and C of the EICG and as discussed on a call with CARB staff on September 8, 2020. After presenting some information on the historical approach used by cement companies to address the existing chemical list, we will describe the proposed approach for addressing the new chemicals added.

Historical approach for existing chemical list prior to proposed EICG changes:

For the AB 2588 chemical list in effect prior to the rule changes, here is the procedure followed by cement companies for AB 2588 compliance:

- Identify applicable chemical groups, such as metals, volatile organics, PAHs, PCDD/PCDF, and other groups;
- Identify test method for each chemical group;
- Perform testing using available test method for all analytes addressed by the method;
- Develop and apply a policy for non-detect values;
- Use the results in health risk calculations (per OEHHA procedures); and
- Repeat testing in case of a significant process or equipment change (per rule language).

Mr. Gabe Ruiz

To the extent that new chemicals are added, the cement companies will try to fit these new chemicals into the above construct for addressing all chemicals, as discussed further below.

Planned approach for new chemical list in proposed EICG changes:

We understand from our September 8, 2020, telephone conversation with CARB that the Appendix C chemical listing is a suggested list only, and that each source category is expected to carry out a vetting process to decide if the suggested chemicals in Appendix C apply to that source category and, if they do apply, determine whether quantification methods are available. We plan to separately provide comments on the Appendix C upfront language to further convey the concept (as stated on the phone call) that this is a suggested list only.

Here are the steps that the cement companies plan to use when processing the new chemicals added to Appendix C, to be able to address them in the same way that the original chemical list has been addressed for the past 20 years or more. We are focusing on the new chemicals from Appendix A that are shown in Appendix C, as an initial step in addressing the full Appendix A list in the future.

- Step 1 – Evaluate whether the new chemical applies to cement: If there is no specific basis for thinking that the chemical applies to cement, the chemical will be eliminated from further consideration. For chemicals that apply to cement, proceed to Step 2.
- Step 2 – Identify the source test method for the chemical group that the new chemical falls in and the analytes covered by that source test method: If the chemical is not listed as an analyte in a standard EPA or CARB published source test method, the chemical will not be reported. For chemicals that have a standard EPA or CARB published source test method, proceed to Step 3.
- Step 3 – Perform testing on the new chemical: If the chemical is not detected in source testing (per the procedure for handling non-detect values, to be agreed upon at a later time), the chemical will not be reported. For chemicals detected, these will be reported.

To the extent that the above steps will require some time to complete, we plan to separately provide comments on the “effective date” for the new chemicals.

If a new chemical is added after the rule effective date, or if a new EPA or CARB source test method is published after the rule effective date, these will be addressed with an agreed upon schedule.

CCMEC appreciates the opportunity to comment on CARB’s amended AB 2588 Emission Inventory and Criteria Guidelines (EICG) dated July 28, 2020 and looks forward to our next discussion with CARB to address the cement industry concerns.
